Foreword 7

Introductory Notes 9

1 Background 11
1.1 Human behaviour and evacuation responses in emergencies and disasters: State and methods 15
1.2 Cross-cultural differences in human behaviour 19

2 Aims and approach of BeSeCu 27

3 Results of focus groups and pretest data 31
3.1 Human behaviour and culture in emergency situations: Focus group analysis of first responders and key representatives 32
3.2 Results of focus groups and scenario pretest 46
3.3 Risk perception: Differences in perceived risk of emergencies and disasters across Europe – Data from the pilot study 50

4 Development of field study instruments BeSeCu-S and BeSeCu-FR . . . 60

5 Field study on human behaviour in emergencies and disasters 71
5.1 Recruitment strategies across all centres 72
5.2 Results of the BeSeCu-S field study 88
5.3 Results of the BeSeCu-FR field study 101
5.4 Situational characteristics of survivor data 117

6 Development of evacuation gestures 125
6.1 Evacuation possibilities using nonverbal communication 125
6.2 Results of the non-verbal communication study 130

7 Field trial on evacuation responses 131
7.1 Background 131
7.2 Culture and human behavioural responses to emergencies and disasters 132
7.3 The basis for the experimental trials 133
7.4 Response phase behavioural framework 134
7.5 The trials 139
7.6 Evacuation trial results 150
7.7 Cross cultural comparison of response phase behaviours 189

8 Recommendations for different types of end-users **216**
8.1 Recommendations for design engineers and regulators. **216**
8.2 Recommendations for emergency communication and information **217**
8.3 Recommendations for developing standards in emergency communication. **221**

9 Educational modules for professionals in crisis situations **243**

10 Conclusions **246**
BeSeCu executive summary **248**

11 Publications from the project **249**

12 Affiliation of authors. **252**
