

# Table of Contents

Acknowledgement	07
Foreword	11
<b>1. Introduction</b>	<b>17</b>
<b>2. Haemodialysis water history – Milestones</b>	<b>19</b>
<b>3. Haemodialysis and its basic principles</b>	<b>23</b>
3.1 Haemodialysis	23
3.2 Haemodialysis membranes	28
3.2.1 The ultrafiltration coefficient	29
3.2.2 Dialyser classification and dialyzer properties	30
3.3 Solute transport across dialysis membranes	33
3.4 Transport of contaminants across dialysis membranes	36
3.4.1 Backtransport, internal filtration, backdiffusion and backfiltration	38
3.4.2 Evidence for back transport of microbial contaminants	38
3.4.3 Safety aspects based on chemical composition of membranes	38
3.4.4 Evidence for the transfer of microbial contaminants across the dialysis membrane by means of backtransport	40
3.4.5 Safety aspects based on chemical membrane composition	43
3.5 References	45
<b>4. Nature and consequences of water and dialysis fluid contamination</b>	<b>49</b>
4.1 Chemical contamination	50
4.1.1 Contaminants with documented toxicity in haemodialysis	52
4.1.2 Deviations of electrolytes normally included in dialysis fluids	61
4.1.3 Inorganic trace elements	64
4.1.4 Organic compounds, pesticides and chemicals of emerging concern	78
4.1.5 Disinfectants, preservatives and by-products	85
4.1.6 Radionuclides	88
4.2 Microbial contamination	89
4.2.1 Microbial contamination in dialysis water and dialysis fluids	92
4.2.2 Derivatives of microbial contaminants and their biological activity	94
4.2.3 Clinical consequences of microbial contamination	100
4.2.3.1 Short-term consequences	100
4.2.3.2 Long-term consequences	102
4.2.4 Biofilm and biofouling	104
4.3 References	110
<b>5. Dialysis water, concentrates and dialysis fluids standards</b>	<b>121</b>
5.1 Rationale behind standards	121
5.2 Dialysis fluids standards	122
5.3 International standards	125
5.3.1 Water chemical quality standards	126
5.3.1.1 Discussion on inorganic quality standards	128
5.3.1.2 Discussion on organic quality standards	130

5.3.2	Concentrates and dialysis fluids chemical quality standards	130
5.3.3	Water and dialysis fluids microbial quality standards	132
5.4	Compliance to the standards	134
5.4.1	Normative frame	134
5.4.2	Evidence-based criteria: regulate what is really affecting the patient's health	134
5.4.3	Efficiency-based criteria: the best quality achievable with sustainable costs	135
5.5	References	136
<b>6.</b>	<b>System selection criteria, design and technical configuration</b>	<b>139</b>
6.1	Overview of technologies and purification processes	139
6.2	Water treatment system	144
6.2.1	Pre-treatment	146
6.2.1.1	Feed water supply	147
6.2.1.2	Temperature blending / tempering valve	147
6.2.1.3	Feed water storage tank	148
6.2.1.4	Chemical injection systems	149
6.2.1.5	Multimedia / Sediment filter	150
6.2.1.6	Cartridge filters	151
6.2.1.7	Ion exchangers	151
6.2.1.8	Activated carbon filters	154
6.2.2	Primary and secondary treatment	157
6.2.2.1	Primary treatment - Reverse Osmosis	158
6.2.2.2	Secondary treatment	167
6.2.3	Dialysis water distribution	172
6.2.4	Disinfection systems	174
6.3	Concentrates systems	177
6.3.1	In-house concentrate preparation	178
6.3.2	Concentrate distribution system	180
6.4	Media supply	181
6.5	Point of use filtration (POU)	182
6.6	System design and technical considerations	182
6.6.1	Architectural and installation considerations	183
6.6.2	Materials selection	186
6.6.3	Installation procedures and documentation	187
6.7	System selection criteria	188
6.7.1	Safety considerations	188
6.7.2	Financial considerations	190
6.8	References	192
<b>7.</b>	<b>Validation of water treatment, concentrates and dialysis fluid delivery systems</b>	<b>193</b>
7.1	Validation	195
7.2	Validation steps	196
7.2.1	The Validation plan	197
7.2.2	Installation Qualification (IQ)	198
7.2.3	Operational Qualification (OQ)	198

7.2.4	Performance Qualification (PQ)	199
7.3	Validation and re-validation	200
7.4	Different approaches to validation	201
7.5	Validation documentation	202
7.6	References	203
<b>8.</b>	<b>Water, concentrates and dialysis fluids monitoring</b>	<b>205</b>
8.1	Monitoring plan: how to monitor a validated system	205
8.2	The Purification Cascade and its Methodology	206
8.2.1	Online and offline monitoring	208
8.2.2	Sampling frequency	210
8.3	Chemical quality monitoring	210
8.3.1	Sampling	211
8.3.2	Assay methods	213
8.4	Microbial quality monitoring	215
8.4.1	Sampling	215
8.4.2	Assay methods and comparison of different techniques	218
8.4.3	Evaluation of microbial monitoring results and relevant (corrective) actions	226
8.5	The importance of trend analyses	229
8.6	Monitoring documentation	229
8.7	References	230
<b>9.</b>	<b>System maintenance</b>	<b>231</b>
9.1	Approaches to maintenance	232
9.2	Maintenance documentation	237
9.3	References	237
<b>10.</b>	<b>Environmental aspects</b>	<b>239</b>
10.1	Reduction of water consumption	240
10.2	Reduction of electric energy consumption	244
10.3	Reduction of externalities	245
10.4	References	246
<b>11.</b>	<b>Responsibilities and training</b>	<b>247</b>
11.1	System validation, monitoring and maintenance responsibilities	247
11.2	Training activities	249
11.3	Interface with water supplier	250
11.4	References	250
<b>12.</b>	<b>Index</b>	<b>251</b>
